

Suntech S.A., the listed maker of IT systems for the telco industry, has signed an agreement to sell a billing system, CRM and Workflow systems to Milmex Systemy Komputerowe, for use in the new, multiregional NetMaks network, one of the largest 4G WiMAX Mobile projects in Europe.

As part of the agreement, Suntech will deliver its billing system, CRM and Workflow and will integrate the business and technical processes with solutions now in use by Milmex. In addition to standard telephone services and broadband Internet access, Suntech-supplied system will also be used for billing and activation of innovative Milmex services, including for example facility monitoring and the delivery of personalized advertizing.

As part of the agreement Suntech became the key supplier of IT solutions for Milmex as well as an integrator of the operator's network infrastructure. Implementation of the system is the continuation of previous collaboration, which included the delivery of the infrastructure for the Central Node and the integration of with WiMAX network. This is the second implementation in Poland (both done by Suntech), which allows the management of WiMAX network subscribers and an automatic provisioning of services supplied to the clients.
